Once again, we rose to a challenge so our **customers could meet the needs of their customers.**

## The challenge

Gevasol Technologies assembles "smart" shelves for AI-powered infrastructure for retail systems.

Demand for the retail systems has soared—and the customer asked us to **triple** production in just a few weeks.

## The solution

Teamwork and close collaboration with the customer made that happen.

We set up an **additional production site** and moved from development to production on the move.

Such a dramatic ramp-up brings about many challenges. The team tackled them with creativity, determination, and professionalism.

**The results** are in the photos: Containers upon containers of smart shelves ready for delivery.
