## The Intelligent Soaker saves water while keeping the cows cool

Equipped with sensors that measure ambient temperature, the soaker sprays the cow with cooling water only when it senses its presence.

The sensors calculate the amount of water needed to cool down the cows based on the barn's temperature.

### Features

- Only sprays when the animal is present
- Simple maintenance: chaining a large number of devices on one line
- Very low power consumption (<0.2W ). No batteries
- Easy to retrofit
