## From Design to Production at Gevasol's Fluid Control Division

### The Product:

A smart valve system for precise and remote pressure adjustment.

### The challenge

Producing a large number of pressure controller units that Gevasol Engineering and the customer had developed together.

### The solution

- The Gevasol Industries engineering team prepares a production line
- Gevasol Technologies creates a PCBA
- The production processes are defined, and a team is trained to carry out the task
- The quality assurance department defines procedures and control processes in collaboration with the customer's quality control department
